

HCAHPS Patient Analysis Project

Project Understanding Report

Prepared By

Neha Pandey

Submission Date

6 August 2026

1. Organization Overview

The National Healthcare Quality Commission (NHQC) is a healthcare organization responsible for monitoring and improving the quality of healthcare services across hospitals. It uses patient satisfaction surveys to evaluate hospital performance and identify opportunities for improving patient care. The HCAHPS (Hospital Consumer Assessment of Healthcare Providers and Systems) survey collects standardized feedback from patients regarding their hospital experiences, enabling healthcare providers and policymakers to make informed decisions.

2. Business Problem

Hospitals collect a large amount of patient feedback data every year. It is difficult to understand this data without proper analysis. The organization needs an interactive Power BI dashboard to compare hospital performance, analyze patient satisfaction, and find areas that need improvement. This will help decision-makers improve the quality of healthcare services.

3. Project Objectives

- Analyze HCAHPS patient survey data.
- Create an interactive Power BI dashboard.
- Compare patient satisfaction across states and regions.
- Identify quality measures that need improvement.
- Compare state performance with national performance.
- Support better healthcare decisions using data.

4. Project Scope

- Analyze HCAHPS patient survey data.
- Create an interactive Power BI dashboard.
- Compare patient satisfaction across states and regions.
- Identify quality measures that need improvement.
- Compare state performance with national performance.
- Support better healthcare decisions using data.

5. Key Business Questions

- Which states have the best patient experience?
- Which quality measures have the highest patient satisfaction?
- Which measures need immediate improvement?
- How has patient satisfaction changed over time?
- How do state results compare with national averages?
- Which regions perform better than others?

6. Assumptions

- The dataset provided is complete and accurate.
- Survey data correctly represents patient experiences.
- State and national results are reliable.
- Power BI will be used to analyze the data and create dashboards.

7. Stakeholders

Stakeholder	Role / Responsibility
Chief Executive Officer (CEO)	Reviews overall healthcare performance and makes strategic decisions.
Chief Quality Officer (CQO)	Monitors healthcare quality and patient satisfaction.
Director of Patient Experience	Improves patient experience using survey insights.
State Health Administrators	Compare state performance and plan improvements.
Hospital Accreditation Team	Uses survey results to support hospital quality and accreditation.
Policy Makers	Use reports to improve healthcare policies.
Healthcare Analytics Team	Analyze data and develop dashboards and reports.

8. Expected Outcomes

- Interactive Power BI dashboard.
- Clear view of patient satisfaction.
- State and national performance comparison.
- Identification of improvement areas.
- Better healthcare decisions using data.

9. Tools Used

Tool	Purpose
Microsoft Power BI	Create dashboards and reports
Power Query	Clean and transform data
DAX	Create KPIs and calculations
Microsoft Excel	Review and understand the dataset
Microsoft Word	Prepare project documentation
Microsoft PowerPoint	Create the final project presentation

10. Conclusion

This project uses HCAHPS patient survey data to understand healthcare performance and patient satisfaction. The Power BI dashboard will help compare national and state-level results, identify areas for improvement, and support better healthcare decisions. The project will provide useful insights for healthcare leaders and policymakers.
